FOR IMMEDIATE RELEASE
December 11, 2023

PMLP Introduces Utility Identification Number

Effective January 1, 2024, PMLP will require a Utility Authorization Number (UAN) for all electrical work done in residential, commercial, or industrial settings that involves interaction with PMLP. A UAN will be required, for example, for new services, temporary services, modifications to existing services, EV chargers, etc.

The UAN must be acquired by the electrician prior to filing for an electrical permit and performing work and will be referenced by PMLP and the Electrical Inspector. The UAN does not replace the need for a permit.

Application for a UAN is available through the PMLP website and requests information, including the electrician's name and license number and a general description of the work.

The introduction of the UAN is tied to the launch of our guide to services, which is intended to give electricians better information when working in the PMLP service territory. The "Information & Specifications for Electric Service Installation Handbook" is available for download from the PMLP website.

The addition of the UANs will help PMLP better serve its customers through improved tracking of jobs that affect your electric service.

For questions on the new guide, the UAN, or any service offered through PMLP, please use the contact form on our website or call us at 978-531-5975.
